

Lab Use Only Sample ID:

Free Soybean Cyst Nematode (SCN) Egg Counts

The Illinois Soybean Association is funding free SCN egg counts for Illinois producers starting Oct. 1, 2023. For a free sampling kit (including instructions and prepaid shipping label) contact Matt at mbarnu2@illinois.edu.

You can also submit free SCN egg count samples by filling out this form and submitting it with your sample.

To Sample:

Collect soil from 6 inches below the soil line. Fill a gallon ziptop bag at least halfway full with soil collected from various parts of the field. Double bag when possible to reduce the risk of bags opening in transit.

Soil samples need to be kept cool in the field and should not be left in a hot vehicle.

How Should Samples Be Shipped?

Soil samples need to be kept cool during transit. Shipping early in the week with an ice pack or dropping off samples in person is recommended. If samples cannot be shipped immediately after being taken, they should be kept cool (ideally in a refrigerator or at 40° F).
