Broom

Use a broom instead of a hose to clean off driveways and sidewalks. You can save up to 80 gallons of water every time.

Earth

Earth is called the "Water Planet" because 3/4 of the Earth's surface is covered in water.

Shower

Please remember...Short showers save water. A shower uses 5 gallons of water per minute.

Bathtub

One bath can use 36 or more gallons of water. Only fill the tub halfway to help conserve water.

Fishing

Many people use water for recreation. Fishing is a type of recreation that many people enjoy.

Toothbrush

Turn off the water while you brush your teeth. You can save 2 gallons of water each time you brush.

Faucet

Leaky faucets waste a huge amount of water! Always make sure the faucet is turned off before you leave the room.

Wildlife

All living things need fresh water to live, including wildlife.

Human Body

Did you know that your body is made up of over 60% water? All of our body parts, even our bones, contain water.

Fish

Fish need clean water to live in. When water is polluted, they may not survive.

Water

Oil Can

Never pour oil down a storm drain. It can pollute the water that you drink.

Boat

People depend on water to help with our transportation needs. Boats are used to carry people and products over the water.

Ice

Water can change from one state of matter to another. When liquid water changes to a solid, we call it ice.

Plants

Plants need water too! They use water to make oxygen for us to breathe.

Water

There are two kinds of water on Earth-fresh and salt water. 97% of Earth's water is salt water that is found in oceans.

Frog

All living things need water to live. A frog spends a part of its life cycle living in water.

Swimming

People use water for many different types of recreation. One of these is swimming.

Cloud

When water changes from a gas to a liquid in the air, clouds are formed. This is called condensation.

Precipitation (Raincloud)

Water that falls to the ground as rain is called precipitation. Precipitation is part of the water cycle.

Hose

To save water, put a shut-off nozzle on your hose. It stops water from running away.

Car Washing

To save water when washing the car, use a bucket and sponge. Also, make sure your hose has a shut-off nozzle.

Evaporation

When water is heated, it changes from a liquid to a gas. This is called evaporation.

Glass of Water

Water is called the "liquid of life" because all living things need clean fresh water to live.

River

Fresh water that we use everyday comes from rivers, streams, lakes and water under the ground called groundwater.

Pipe Wrench

To help conserve water, fix all your leaky faucets and pipes.

Laundry

Ask your parents to only do full loads of laundry. It takes the same amount of water to wash a full load or just a pair of socks.

Snow

Water that falls to the ground as snow is one form of precipitation.

Pitcher of Water

We can help save water by putting a pitcher of water in the refrigerator for cold drinking water.

Glacier

Only 3% of the Earth's water is fresh water. Most of this freshwater is found in glaciers at the polar icecap (2%).

Insects

Insects need clean water. Scientists can tell if a river or lake is healthy by studying the insects who live there.
