New Requirements for Applying Dicamba on Soybeans in 2021

Engenia by BASF
XtendiMax with Vapor Grip Technology by Bayer
FeXapan plus Vapor Grip Technology by Corteva
Tavium by Syngenta

Requires an approved pH-buffering agent, also known as a volatility reducing agent, be tank mixed with dicamba products prior to all applications

Must consult the FieldWatch sensitive crop registry before application
www.fieldwatch.com

Additional Recordkeeping items

Prohibits applications when the wind is blowing toward an adjacent residential area

Requires a downwind buffer of 240 feet and 310 feet in areas where listed endangered species are located

Prohibits applications when the wind is blowing toward any Illinois Nature Preserves Commission site* that is adjacent to the proposed field of application

Do not apply after June 20, 2021

Temperature restriction of 85 degrees Fahrenheit

The intent of these additional restrictions is to reduce the potential for off-target movement of these products, thereby reducing the potential for possible adverse impacts to dicamba-sensitive crops/areas. Please follow all the specified instructions on the manufacturer’s label. For more information—https://www2.illinois.gov/Pages/news-item.aspx?ReleaseID=22533
