Join these free summer gardening webinars for tips to help you grow!

Learn something new around the garden space, including how sunflowers are helping the global food market, discovering trees that bloom during summer’s heat, and extending your growing season with a backyard greenhouse.

**Beyond the Beauty: The Global Impact of Sunflowers**

June 20 at 1:30 PM

To gardeners, sunflowers are known for their beauty, but they are not just another pretty face. Explore the impact sunflowers have on the global food market and their potential to help contaminated lands recover from industrial use. After attending, attendees will have a greater appreciation for these bright summer blooms and be eager to incorporate some of the new cultivars into their own growing space.

*Presenter: Emily Swihart, Extension Horticulture Educator*

**More than Shade: Explore Summer Blooming Trees**

July 11 at 1:30 PM

After spring blooms fade and summer arrives, trees are often showing green foliage and offer the opportunity for shade from the summer heat. Trees are more than that, as summer-blooming trees and shrubs are just getting started. Discover different summer-blooming trees that provide a boost of color and ornamental features in the landscape over another season.

*Presenter: Sarah Vogel, Extension Horticulture Educator*

**Before the Build: Considerations for Backyard Greenhouses**

August 22 at 1:30 PM

Have you ever thought of going outside to your backyard greenhouse during the cold weather months to pick fresh lettuce or plant some basil? Explore a variety of budget-friendly backyard greenhouses, what can be grown in them, and how to extend a growing season.

*Presenter: Christina Lueking, Extension Horticulture Educator*
