June is Pollinator Month

BY NICOLE FLOWERS-KIMMERLE

Summer of 2024 will start with a lot of attention on insects. The 13 year and 17 year periodical cicada broods will emerge at the same time in Illinois. This hasn't happened since 1803, when the United States completed the Louisiana Purchase, the Napoleonic Wars began and palladium was discovered. So make observations, listen to their unique "song," and enjoy this once in a life-time natural occurrence. June is also Pollinator Month where we pay attention to these creatures that keep our food productions systems running and support biodiverse ecosystems. So don't let these insect friends "bug" you. Find out ways that we can support and appreciate "the little things that run the world."

Pruning Perennials for Longer Lasting Blooms

BY NICOLE FLOWERS-KIMMERLE, [ILRIVERHORT BLOG](#)

Pruning perennial flowers takes a garden from looking fair to fabulous. Deadheading, cutting back, and pinching are all pruning techniques that can keep perennial plants looking well cared for, healthy, and colorful.

Pruning perennials is a complex topic because different plants need different kinds of pruning. Experience, developed with practice and close observation of the plants, helps to determine when and what type of pruning is required.

Growing number of tick bites

A tick bite can happen anywhere: a park, your backyard, a farm field. The uncertainty can be scary. Do you pull it out? How? What do you do with the tick? What if you get sick?

New research from a multi-department team of university scientists explored the role Illinois Extension has in educating communities about ticks and preventing risky encounters. These videos about [Ticks and Tickborne Disease](#) are available online.

Quail comeback

BY CARLA RICH MONTEZ, EMN

Almost everywhere you look on Brent Fowler’s farm, a restored habitat is visible. But it hasn’t always been that way.

Fowler grew up during the era of farm modernization when agriculture expanded in nearly every way. Fields got larger. Machinery got bigger. The crops shifted to more profitable grains and clean farming practices that reduced weedy vegetation in agricultural fields.

As farming changed, so did the landscape. Fencerows and hedgerows were removed. Small grains like oats and wheat were replaced by corn and soybeans. Much of the grazing land was converted to cropland. In the transition, habitat started to disappear.

little gardener’s day - July 30

BY JENNIFER BASS, EMG, EMN & C@H

In July, ICC becomes a haven of children and adults learning, exploring and having fun in the sun. ICC and Master Gardeners partner together to make a day for younger children and an accompanying adult to engage in activities while learning about a variety of interests found in the garden. Individuals can walk freely throughout the ICC grounds, learn about a variety of subjects, make crafts, take time for stories, taste vegetables from the garden, participate in a scavenger hunt, and discover more about the world in which they live. Come join us July 30, from 9 to 11 a.m. at ICC. Our theme this year is insects. We hope to see you!

“My favorite nature activity is walking through prairie and looking at all the bees and butterflies and knowing they are there because of me.”

BRENT FOWLER

The cicadas are coming! Periodical cicadas in Illinois in 2024

BY KEN JOHNSON, [GOOD GROWING](#) BLOG

Can you hear them? Soon, Illinois will be awash in the songs of periodical cicadas. This year (2024) is a big year for periodical cicadas in Illinois, where Broods XIII and XIX will be emerging throughout much of the state at the same time. This is the first time this has happened since 1803, and it won't happen again until 2245! Despite some talk of an impending insect apocalypse, cicadas don't pose a threat to humans (or pets), although that newly planted tree or shrub may be a different story.

[READ MORE](#)

“Female periodical cicadas lay eggs by cutting branches, causing flagging. This damage does not kill healthy, mature trees..”

KEN JOHNSON

Learn more about Pollinators

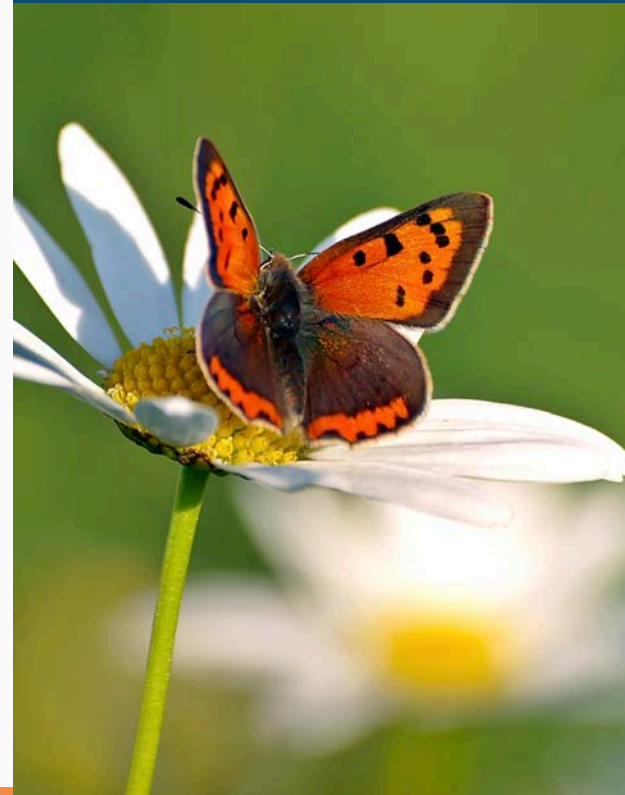

This month check out the [the Illinois Pollinators Website](#). This site is devoted to everything pollinators in Illinois.

Pollinators are a group of amazing insects that are vital to both plant life and human life on earth. In recent years, pollinator populations have been declining dramatically which has prompted an immediate need for their protection and perpetuation on the landscape.

Explore the website to learn more about the fascinating relationship between these important insects and the plant life we all depend on.
