Hemp Seeds 101

- Three (3) main varieties: fiber, grain, and CBD
- Only female hemp plants will produce flowers with high contents of CBD
- Approx. 25,000-27,000 seeds per pound

Regular Seeds vs. Feminized Seeds

- Fiber and grain varieties will be regular seeds - both male and female plants
- CBD varieties may be “feminized”, meaning less likelihood of having male plants
- Feminized seeds are generally more expensive

How Many Seeds Per Acre?

- Grain - approx. 400,000 hemp plants per acre or 25-35 pounds of seed per acre, accounting for 70-80 percent germination rate
- Fiber- approx. 800,000 hemp plants per acre or about 45-55 pounds of seed per acre
- CBD - 1,500-3,000 hemp plants per acre, depending on variety and spacing

Estimated Costs

- Grain/Fiber - less than \$10 per pound depending on variety and order quantity
- CBD - approx. \$0.30-\$5 per seed or \$3,500-\$20,000 per pound depending on variety, order quantity, and regular or feminized seed
